23. Problem: (use additional Sheets if necessary) STK 9840/9940 drives in the ECS Project have been displaying "spin-up errors" when AMASS/ACSLs attempts to put a volume in the drive. STK has stated that the most recent microcode provides code that will help to resolve this issue. The spin-up errors are particularly troublesome, because it causes the drives to go off-line, which in turn causes the volume to be marked "inactive". This will affect performance, as well as access to the archive. We have installed and tested the new microcode for STK 9840 (1.30.109) & 9940 (1.30.209) drives in the PVC and VATC without incident.						
24. Proposed Solution: (use additional sheets if necessary) Install and test the new microcode for STK 9840 (1.30.109) & 9940 (1.30.209) drives in all DAACs and the VATC.

Title of Change: Install new microcode on STK 9840/9940 drives

We have been having problems with STK 9840 & 0040 drives going off-line because of a spin-up error. Below is an output from a spin-up error and how the system responds.

```

```

We have installed the new microcode in the PVC and have noticed a considerable decrease in the number of spin-up error messages.
